

ATP Algaewheel Treatment Plant

Santa Barbara, Guerrero, Mexico

The Algaewheel Wastewater Treatment Plant for the community of Santa Barbara, Guerrero, Mexico, is a replacement treatment plant for a failed system. The plant is Algaewheel's first facility at Guerrero and sets a new standard for wastewater treatment and water reuse. Given that most facilities in Mexico do not meet basic treatment standards (75/75), achieving full 30/30 reuse standards is a huge step forward for the country.

Name of the Project	Santa Barbara
Location	Guerrero, México
Project type	Plant replacement
Flow	Daily average 3 l/s
Effluent contaminant limits	30mg/l CBOD5, 30mg/l TSS
Discharge	Stream
Project completion date	Sep 2020
